DETAILED ACTION

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 12/09/2003 have been considered by the examiner.

Drawings

Figure 1, should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 2828

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 20 – 29 are recites the limitation "table" in claims 20, line 13 and 27, line

11. There is insufficient antecedent basis for this limitation in the claim.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 27 – 29 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 26 – 29 of copending Application No. 10/683,212. Although the conflicting claims are not identical,

Art Unit: 2828

they are not patentably distinct from each other because the present claims are broader than the claims of '212, all of the limitations are claimed in '212.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

Claims 1 – 19 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 1 recites a method of controlling optical power for a laser in a fiber optic link where the laser is selected from among a population of similar lasers, structure including the specific structure limitation of *determining a relationship between modulation current (I_{mod}) and temperature using the data models of laser performance; determining a relationship between target average power and temperature for a specific laser device over a range of temperature using the base power level; and adjusting laser performance based on the temperature target, target average power, and modulation current (I_{mod}), which is neither anticipated or disclosed nor suggested in any piece of available prior art, which is neither anticipated nor obvious over the prior art of record.*

Claim 5 recites a method of establishing a trim and compensation scheme for a laser emitter in a fiber optic link where the laser emitter is selected from among a population of similar lasers, structure including the specific structure limitation of *laser having the determined base power levels does not satisfy the set of pre-specified operating parameters, the user specified performance parameters are adjusted and the operations of b) and c) are repeated to determined a new base power level; if a laser having the determined base power does satisfy the set of pre-specified operating parameters, then process modes on to the next operation d); and determining a relationship between temperature and associated current values that can be used to regulate laser performance over a range of temperature*, which is neither anticipated or disclosed nor suggested in any piece of available prior art, which is neither anticipated nor obvious over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
